Some New CSS3 Features

CSS3 is the third major revision of the W3C CSS Specification. CSS3 builds on earlier versions of CSS and adds numerous new features, many of which you will learn about in this course. Some popular new features include:

- Support for multiple page backgrounds
- Adding drop shadows to text and page elements
- Using gradients
- Transforming object dimensions
- Style transitions
- Creating animations
- Rounding border corners
- Selecting elements based on attributes
- Selecting elements based on pseudo-classes
- Selecting elements based on pseudo-elements
- Grouping selectors using combinators
- Using flexible boxes for page layout
