- 6. Code of Conduct**
- 7. Assistance**
- 8. Copyright and disclaimer**
- 9. Making the Most of this Course**
- 10. What's next?**

1. Welcome!

As you begin this course, please read and review this syllabus—more than once if needed. The information that follows will provide an outline that will help you know what to expect. It will also help you manage your study time more efficiently.

Once you've made your way through this syllabus, you'll be able to see the remaining course activities on the main course page.

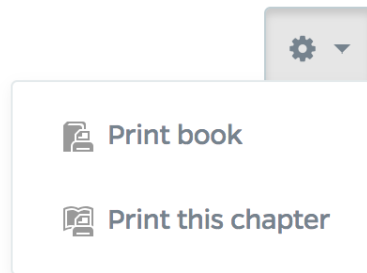

In the meantime, if you have any questions about the course or the syllabus, please contact your instructor.

Navigation

To return to a specific page in the syllabus, use the table of contents in the collapsed menu on the right side of the page. To open the collapsed menu, click on the pink semi-circle on the right.

Print the syllabus

You can save or print this syllabus as a PDF. Click on the gear button in the top right and select **Print book** to print the entire syllabus or select **Print this chapter** to print a single page.

2. Goals and outcomes

In this course, you will be introduced to advanced concepts in web design. You will learn the techniques and master skills for designing an effective website, using HTML5 features. The course covers the importance of web page validation, use of Cascading Style Sheets (CSS), the box model, designing responsive web pages, advanced techniques for page layout, and how to style and incorporate tables, images, multimedia, and forms.

Time commitment

Plan to spend about 7 hours per each unit working on this course. The course outline can be used as a guide when progressing through the learning topics of the course.

Course Goal

The course goal is to provide you with knowledge and skills necessary to develop a fully functional website and prepare you to succeed in other computer science and technology courses.

Course outcomes

Upon successful completion of this course, you will be able to:

- Know how to use the new HTML5 and CSS3 features
- Understand the importance of web page & browser validation
- Use selective styling with CSS
- Implement page enhancements & visual effects with CSS
- Build responsive web pages
- Implement advanced techniques for page layout
- Incorporate client-side scripting using JavaScript
- Implement drag & drop capabilities

Here are a few ways you will learn in this course: video lectures, programming assignments, quizzes, virtual classrooms and other activities. You are encouraged to take full advantage of discussion forums and other course activities online that can be helpful in their studies. Reference material such as videos and notes will help you prepare for the assignments.

3. Requirements

You will need the following items to participate in this course:

Software

- Basic text editor such as Notepad (Windows) or TextEdit (Mac) or enhanced text editor. Instructions are provided in the first unit of the course.

Zoom

This course includes virtual class meetings where students will meet individually with instructors. These meetings may be audio and/or video recorded including complementary files such as transcripts and chat logs, and projects. This information may be released and viewed by other students in the class or instructors. In meetings where participation is not required for instructional purposes, you may opt-out of identification in the recordings by muting your audio, disabling your video, and not contributing in the chat window.

This course includes the option to view Zoom's auto-generated closed captions. These captions may at times be inaccurate and should be viewed in that light. To use this feature, select on the caret “^” located next to the CC/Live Transcript icon at the bottom of the Zoom window and select Show Subtitles (captions appear at bottom of the Zoom screen) or View Full Transcript (captions appear in window to the side and can be saved).

4. Schedule

There are no deadlines in this individually-paced course but you are expected to work consistently, communicate with your instructor, and maintain satisfactory progress. The course outline can be used as a guide when progressing through the learning topics of the course. The course needs to be completed in the order that it is presented. You will not have access to certain assignments or quizzes if the required tasks are not completed and graded by your instructor in the correct order.

If your goal is to complete this course in three months, you should complete at least one unit per week. Students are most successful when they work consistently and regularly each week. However, you can take a break and [pause](#) your enrollment if you are temporarily unable to work on your course. Seven days is the minimum amount of time enrollment can be paused.

Tracking your progress

There are a few ways you can track your progress in this course. First, there is a progress bar which shows the assignments you've completed. Second, there are checkboxes to the right of each activity. Activities that must be submitted, like quizzes, are automatically checked off. You may have the option to manually mark other activities as complete by clicking on the checkbox.

This page includes a third way to stay on top of your coursework. Below is a complete course outline. You may find it helpful to print a copy of this page and use the old fashioned "pen and paper" method of checking off completed assignments.

Course outline

Introduction

- Introduction to HTML5 & CSS3
- Validating Web Page & Browser Compliance
- Testing & Debugging Tips

Web Design Guidelines

- Basic & Advanced Web Design Principles

- Designing Website Organization
- Designing Website Structure
- Designing Website Navigation
- More Website Design Tips

Working With HTML5 Page Layout and APIs

- Semantic Page Layout in HTML5
- Additional HTML5 Page Markup
- Directly Editing Web Page Content
- Spell-Checking User Content
- Spell-Checking User Content File
- The Summary & Details Layout Elements

Working With CSS3 - Selective Styling

- Selective Styling with CSS
- Inheritance & Cascading Rules
- Styling Page Elements Using Combinators
- Styling Page Elements Using Pseudo-Classes
- Styling Page Elements Using Pseudo-Elements
- Selective Styling Based On Attributes
- Selective Styling Based On Media Type

Enhancements & Visual Effects with CSS

- Implementing Drop Shadows
- Gradients & Rounded Borders
- Opacity & Multiple Backgrounds
- Transforming Object Dimensions
- CSS Transitions
- CSS Animations

Visual Design & Implementation - Part 1

- The Box Model - Part 1
- The Box Model - Part 2
- Styling Page Element Width & Height
- Positioning Page Elements

Visual Design & Implementation - Part 2

- Floating Page Elements
- The Z-Index
- The Flexible Box Model
- Multi-Column Layout

Building Responsive Web Pages

- Introduction to Responsive Page Design
- Making Images & Media Flexible
- Designing Flexible Layouts
- Media Queries
- A Responsive Web Page Design Strategy

Introduction to Client-Side Scripting - Part 1

- Introduction to JavaScript
- Comments & Code Placement
- Variables & Functions
- Making Decisions
- Looping Statements
- The Document Object Model (DOM)

Introduction to Client-Side Scripting - Part 2

- Events & Event Handlers
- The Document Object Model (DOM)
- Using Map & Geolocation Features
- Using Drag & Drop

Going Live With Your Website

5. Grading

Grading breakdown

Activity	Percentage
Assignments	30%
Project	25%
Quizzes	30%
Final Exam	15%

Grading scale

Percentage grade	Letter grade
98-100%	A+
93-97%	A
90-92%	A-
87-89%	B+
83-86%	B
80-82%	B-
77-79%	C+
73-76%	C
70-72%	C-
<70%	No grade issued*

* You must receive a 70% or above to pass the course.

Quizzes

There are quizzes for each unit that will consist of content from the lectures and supplementary readings. There are two attempts at each Unit Quiz, and the higher of the two scores will count toward your overall final grade.

Assignments

There will be 10 assignments for this course. Each of these assignments is based on information from the lectures and supplementary readings. Be sure to follow the assignment instructions carefully and make a checklist of all required components before submitting.

Project

There is one project in this course. The project will be released after the completion of all work in the final Unit. You must complete required course work to get access to the project. The projects must be done individually and the work must be your own. Students may, however, discuss ideas and share course-related information on the discussion forums of the course.

Final Exam

The final exam will be based on content from the lectures. All assignments must be submitted and quizzes must be taken prior to taking the final exam. Unlike the unit quizzes, there is one attempt at the Final Exam and this score will count toward your overall final grade.

In order for CTY to assign a course grade, certain procedure must be followed. A custom internet browser called Respondus LockDown Browser must be used to access the midterm exam and/or the final exam. Instructions and the download link are available inside the course.

6. Code of Conduct

CTY expects the highest standards of behavior both in deportment and in dedication to academic pursuits. You are expected to:

- Adhere to the highest standards of academic honesty and integrity.
- Strive to do the best work possible.
- Respect individuals of different races, cultures, religions, genders, sexual orientations, disabilities, and national origins.
- Be friendly, cooperative, and responsible to all people in the CTY community.
- Observe all rules for student conduct.

If you wish to help or receive help from someone other than the instructor, or are interested in collaborating with another student, you must check with the CTY Online Programs instructor first to reach an understanding of what is considered acceptable collaboration for that particular course. Additionally, please read the paragraph on Student Collaboration below.

You may receive failing grades or be dismissed from the program, with no tuition refunds, for any of the following reasons:

- Cheating, or other acts of academic dishonesty, including failing to follow quiz or exam rules for time limits, closed book, etc.
- Plagiarizing, defined as the submission or presentation of work, in any form, that is not a your own, without acknowledgment of the sources.
- Harassing or interfering with the work of others, whether via email or any other medium.
- Not attending to their academic work in a satisfactory manner.

Student Collaboration

No collaboration is permitted on quizzes and exams. Passwords for exams/projects should not be shared. You may discuss labs/assignments/projects with other students but these discussions should be limited to broad, conceptual questions. You are also allowed to discuss more detailed questions regarding the design and implementation of your programs. However, you are not allowed to share or copy code under any circumstances. For example, it is permitted for one student to ask another student how he/she did something or to ask for help debugging a problem in his/her code; it is not permitted for a student to take another student's code or to let another student write code for him/her. Using the Internet for reference purposes is allowed for assignments but copying code found online is not allowed. Once you have finished the course, sharing your work and course content with future students taking the course is also a violation of the CTY Student Code of Conduct.

7. Assistance

Course support

For any issues, contact the instructor directly. Your instructor is your first point of contact through email, phone call, and by appointment in the virtual classroom. Please set virtual classroom appointments at least 24 hours in advance. The instructor's contact information is provided in the Welcome Letter, their email signature, in their profile on the main course page, and enrollment notification email.

Technical support

After you've tried troubleshooting yourself (Tip: try a different browser or device) you might need more help. For technical support, contact your instructor and fill out the [CTY Online Course Technical Support](#) form.

Pausing the enrollment

If you are sick, busy, traveling, or otherwise unable to work on the course for more than seven (7) consecutive days, you can have the enrollment paused by the person who arranged the enrollment to save enrollment time. You will not have access to your course or instructor while the enrollment is paused and no work can be submitted during that time. Instructions how to pause your enrollment can be found [here](#).

Expectations for Instructor Feedback

Email messages from students and parents/guardians are usually answered within 1 business day. Assignments for individually paced courses are graded within 1-2 business days. Students and parents should not assume instructors will be available during holidays unless specific arrangements have been made. More detailed information about the Expectations for Instructor Feedback can be found [here](#).

Online Program Office

For questions regarding MyCTY or [pausing](#) or [extending](#) enrollment time, please contact the main Online Programs Office at ctyonline@jhu.edu or the US phone number 410-735-6166.

Disability services

CTY is committed to providing reasonable, appropriate, and necessary accommodations for qualified students with disabilities. To do so, open communication between CTY and parents is essential to meeting students' needs. [More information](#) can be found on the program website.

8. Copyright and disclaimer

Copyright

The copyright to all content and materials within CTY Online courses belongs to Johns Hopkins University, unless another copyright is indicated. Student may download material from the sites only for student's own personal, non-commercial use. No reproduction, distribution, modification, or transmission of this material is permitted without express written consent of Johns Hopkins University or the indicated copyright holder.

9. Making the Most of this Course

We understand that each person has slightly different set of goals and expectations coming in. Our goal, as much as is possible, is to help you reach those goals and, if we're lucky, teach you a few things you didn't know you wanted to know along the way.

As you start this course, we want you to know that we understand the challenges of online learning—we've been there. :) We'll do our best to make sure that the time you spend is worthwhile. To help us help you though, we ask you to consider the following:

Commit completely.

You made the first step—you registered for the course. Now it's time to decide that you really want to do this and set aside the time to make it happen. Make plans now for when you will work on this course and schedule it into your week.

Participate early and often.

Just because there are no due dates each week, doesn't mean we only expect you to log in a few times. :)

It is very important that you check your email regularly and contact your instructor when you need help.

It's much easier to become engaged if you check the forums and contribute regularly. Introduce yourself early, let people get to know you, and post frequently. We can pretty much guarantee you'll enjoy the forums much more in bits and pieces over trying to read everything in one sitting!

Ask questions!

Don't be afraid to ask questions of anyone and everyone. We like hearing from you!

Give valuable feedback.

Give the kind of feedback to your peers that you'd like to receive. This is huge—really. When you're replying to a classmate in a forum, give them the kind of feedback you want from them.

Don't be afraid to make mistakes.

We want you to play, explore, and try things. Explorers ask interesting questions!

10. What's next?

Now you're ready for the other course activities! Click the Done button on the right.

To begin the Introduction section of the course, click on Introduction in the Navigation menu on the left side of the page. Or, click on Introduction in the center of the page of the course homepage.

If you have any questions, contact your instructor.

Looking forward to learning with you!
